High Cold Weather Suit

Excellent Quality Down Garments Specially Designed For High AL TD Filled With Prime Quality White Goose Down , Shell Fabric Water Proof , Wind Proof & High Body Breathable.

Outer Shell :

Outer Shell 100% Nylon RibStar Fabric with 2 Layers For Extra Protection and Durability.

Inner :

3M™ Thinsulate™ Insulation is used in jackets & Trousers to help keep you warm when it's cold outside. The unique micro fibers or fine fibers that make up Thinsulate insulation work by trapping air molecules between you and the outside. The more air a material traps in a given space, the better it insulates you from the cold outside air. Because the fibers in Thinsulate insulation are finer than the fibers used in most other synthetic or natural insulation, they trap more air in less space, which naturally makes Thinsulate insulation a better insulator. So we haven't repealed the laws of nature with our thin insulation.

Benefits:

- Breathable
- Moisture-resistant
- Both machine washable and dry-cleanable

Jacket Features

Accessories Pocket on Left Arm

Velcro & Zip inner of Hood with Attachment Jacket

Inside Lining with 3M Thinsulate Layer

SAFETY WORK COVERALL

Nomex Safety Coverall

NOMEX® IIIA coveralls Made from Dupont are the protection required for industrial flash fires. The aramid fibers used in Nomex coveralls garment construction provide superior flame resistance. The fibers will not melt, burn, drip or support combustion in air. Garments of NOMEX® aramid fiber have been used for more than 30 years for protection against fire related personal injury. During this time, the line of Nomex coveralls and related Nomex apparel have been expanded and improved to include products made from fiber blends, such as blends of NOMEX® with KEVLAR® and static-dissipative fibers. The family of NOMEX® aramid fibers include:

100% NOMEX® T-450, which is used in it's natural, undyed state or dyed for sewing thread;

NOMEX® III, a blend of NOMEX® and KEVLAR®;

NOMEX® IIIA, a blend of NOMEX®, KEVLAR® and a static dissipative fiber; and

Producer- colored NOMEX®, which is supplied in a blend with KEVLAR® and may also be supplied with a static-dissipative fiber.

Properly dyed and finished garments of NOMEX® are inherently flame resistant. No laundering procedures are known to remove the flame resistance of Nomex coveralls. However, thermal protection can be compromised by the presence of flammable contaminants on the garment, or on the fabric from which it is made. Even though garments of NOMEX® are inherently flame resistant, flammable contaminants on the garments can ignite and burn until consumed, thus increasing heat transfer to the wearer.

Sizes : Available as per size chart on Page No. 38
